SUMMARY

Software Engineer with 3.5+ years of experience building high-scale distributed systems, data platforms, and full-stack applications in Golang, Java, Spring Boot, TypeScript, and React/React Native. Proven track record delivering end-to-end backend services, ingestion pipelines, and mobile apps

SKILLS

Languages: Golang, Java, TypeScript, JavaScript, Python, SQL

Backend: Spring Boot, Microservices, REST APIs, Kafka, Pub/Sub, Redis, Elasticsearch

Frontend: React, React Native, Redux, Micro-frontends, iOS, Android

Cloud & DevOps: Google Cloud Platform (GCP), Cloud Run, BigQuery, Docker, CI/CD, Datadog, Sentry

Databases: PostgreSQL, MySQL, Elasticsearch, Redis, Liquibase

AI Tooling: Cursor, Model Context Protocol (MCP), GenAI workflow automation, n8n

Practices: System Design (HLD/LLD), Agile, TDD, Code Review, Mentoring

WORK EXPERIENCE

Wayfair — *Software Engineer II* December 2024 – Present

- **Architected a product-ownership and assortment-management platform** serving as the system of truth across merchandising. Authored RFCs covering ownership transfer, market-context transitions, and integration with downstream catalog, exclusivity, and audit systems.
- **Designed a scalable data ingestion framework** streaming Kafka, Pub/Sub, and BigQuery data into Elasticsearch and relational stores, indexing 30M+ records with sub-second query latency and 99.9% uptime; reduced new-source onboarding from weeks to days.
- **Led high-scale data migrations with zero data loss** across 50K-record, 40K-SKU, and 100K-SKU workloads by designing rollback strategies, validation plans, and post-migration monitors; introduced a Liquibase-based migration pattern adopted across 10+ repositories.
- **Built end-to-end merchant workflows** for product assignment lifecycle in React and Spring Boot, unblocking senior-merchant review bottlenecks and reducing manual merchandising operations by ~40%.
- **Drove team-wide GenAI adoption** using Cursor, MCP integrations, and a GenAI-based test-generation framework. Cut PR review and test cycles by ~50% and reduced MTTR by ~40% through Datadog dashboards, monitors, and alerts.

Infra.Market — *Senior Software Engineer* July 2022 – December 2024

- **Owned end-to-end design and delivery of a Ticket Management System** handling 100K+ tickets/day, reducing average turnaround time from 8 days to 3 days with fewer than 10 daily production issues.
- **Served as Feature Owner and Solution Architect** for backend systems in Golang, Kafka, and SQL. Authored HLD and LLD for Zendesk integration, a workflow orchestration engine, and role-based persona onboarding.
- **Led a cross-functional team of 6 engineers**, driving code reviews, sprint planning, and release management. Mentored 4 junior engineers through structured growth plans.
- **Developed and launched a React Native mobile app from scratch**, including the organization's first iOS app; increased adoption by 55%, enabled multilingual support across 5 locales, and improved app load times by 70% via reusable component libraries and Loyalty/KYC npm SDKs.
- **Improved reliability through observability and CI/CD pipelines** using Sentry, Microsoft Clarity, and AppCenter. Reduced crash rates by 25% and increased over-the-air update adoption by 50%.

EDUCATION

The National Institute of Engineering, Mysore — B.E. in Information Science, August 2018 – June 2022 | GPA: 9.0/10
